PROFESSIONAL SUMMARY

Information Systems student awaiting graduation with hands-on experience in Data Analytics, Business Intelligence, and System Analysis through internships at Bank Indonesia and Diskominfostandi Kota Bekasi. Proficient in SQL, Python, Excel, Power BI, Tableau, and MySQL, with experience in data processing, dashboard development, data visualization, and business reporting. Strong analytical and problem-solving skills with an interest in transforming data into actionable insights and supporting data-driven decision-making.

EXPERIENCE

KANTOR PERWAKILAN BANK INDONESIA DKI JAKARTA – Jakarta, Indonesia

Internal Control Officer Intern

Aug 2025 – Feb 2026

- Developed an interactive Power BI dashboard with 3 pages to monitor ICK achievement, calculation results, and department-level performance.
- Validated and prepared performance data through data QA checks to ensure accuracy and consistency of metrics used in monthly reporting.
- Integrated Power Apps with 5 SharePoint lists by extending data models and synchronization workflows, centralizing performance assessment data for Internal Control Officers.
- Digitized monthly ICK reporting workflows, replacing repetitive manual data-entry and reporting processes and improving reporting efficiency.
- Collaborated with application developers and management to test, troubleshoot, and deliver application enhancements.

DISKOMINFOSTANDI KOTA BEKASI – Bekasi, Indonesia

Data Analyst Intern

Mar 2025 – Jul 2025

- Led the end-to-end development of 2 web-based analytics and monitoring systems, translating requirements from 4 stakeholders into 34 UML and system-design artifacts and functional solutions for management and staff.
- Developed a Python/Streamlit analytics platform incorporating Isolation Forest anomaly detection to identify data-quality issues across 20 datasets, supporting automated monitoring and early anomaly identification.
- Built 3 Power BI dashboards, 1 Tableau dashboard, and 20 interactive visualizations using Python (Pandas, NumPy, Matplotlib, Plotly), Excel (Power Query, Pivot Tables), SQL, and MySQL to centralize monthly performance monitoring.
- Automated data analysis and reporting workflows using SQL and Python, replacing Google Forms-based manual reporting and improving the efficiency of recurring monitoring processes; the resulting AI-powered solution was selected for an internal innovation competition.
- Translated complex analytical findings into 20 public-facing data infographics using Canva and conducted exploratory analysis of historical datasets to identify trends, changes, and outliers for management decision-making.

PROJECT

SIPDA Analytic Platform – Bekasi, Indonesia

Aug 2025 – Nov 2025

- Analyzed Developed a web-based analytics platform using Python and Flask for dataset management, exploratory analysis, predictive analytics, diagnostic analysis, and anomaly detection.
- Implemented Isolation Forest to identify anomalous observations and support data-quality monitoring across uploaded datasets.
- Developed interactive data visualizations and analytical modules to help users investigate trends, performance, and potential data issues.
- Integrated MySQL for dataset and metadata management and designed the platform to support data-driven monitoring and decision-making.

Employment Placement Analytics Dashboard - Bekasi, Indonesia

May 2025 – Jun 2025

- Developed an interactive Tableau dashboard by cleaning, transforming, and visualizing 2022–2023 Open Data Kota Bekasi datasets, enabling more accessible analysis of employment placement and workforce distribution trends.
- Analyzed workforce distribution and employment placement data spanning 2 years, identifying key trends and presenting actionable insights through interactive visualizations.
- Collaborated in a 2-member internship team to design and deliver analytical dashboards, ensuring project objectives and reporting requirements were completed on schedule.
- Designed data-driven dashboards and visual reports using Tableau, translating complex datasets into intuitive visualizations that supported public information dissemination and stakeholder decision-making.
- Published analytical dashboards on the Open Data Kota Bekasi platform, increasing the accessibility of employment and workforce insights for public users and government stakeholders.

Global Coffee Export Analytics Dashboard – Independent Project Indonesia

Jul 2026 – Aug 2026

- Developed an Analyzed global coffee export data spanning 1990–2022 using Python and Pandas to benchmark the export competitiveness of Indonesia vs. Brazil, evaluating market volume, pricing, and year-over-year performance.
- Engineered a data-cleaning pipeline covering 3 key processes—invalid/outlier filtering, text standardization, and median-based missing-value imputation—to improve dataset consistency and analytical reliability.
- Developed an interactive Streamlit + Plotly business intelligence dashboard featuring 5 analytical visualizations and dynamic filters, enabling users to explore market trends and country-level export performance.
- Identified a significant competitive gap, with Brazil recording 92.1 billion kg in cumulative export volume while Indonesia demonstrated a higher average export price, highlighting differences in scale and market positioning.
- Automated real-time executive summaries using Python, dynamically calculating YoY growth rates and market-volume gaps based on user-selected periods, and deployed the application to Streamlit Community Cloud for stakeholder and recruiter access.

ORGANIZATION

KELOMPOK STUDI MAHASISWA CYBER SECURITY- Jakarta, Indonesia

Head Of Academic Division

May 2024 – Feb 2025

- Led the Academic Division by designing a 9-session cybersecurity curriculum and developing structured learning syllabi for 20+ members.
- Coordinated weekly mentoring programs as the Person-in-Charge (PIC), managing 3 mentors to ensure consistent delivery of academic activities and participant engagement.
- Delivered 3 hands-on cybersecurity mentoring sessions covering fundamental concepts and practical exercises for 20+ participants.
- Organized a Capture The Flag (CTF) competition for 30+ participants, collaborating with cross-functional committees to coordinate event planning and execution.
- Collaborated with other organizational divisions to enhance the quality and effectiveness of cybersecurity learning programs and academic initiatives.

EDUCATION

UNIVERSITAS PEMBANGUNAN NASIONAL VETERAN JAKARTA – Jakarta, Indonesia

Aug 2022 - Now

Last Year Computer Science Student; Cumulative GPA: 3.86/4.0

ADDITIONAL

Technical: SQL, MySQL, Python, Excel, Power BI, Tableau, Laravel, Bootstrap, Requirement Analysis, UML, Flowchart, Use Case Diagram, Database Design, Power Apps, SharePoint

Languages: English (Intermediate), Indonesia (Native)

Certifications & Training: BNSP Certified System Analyst
