EXPERIENCE

KANTOR PERWAKILAN BANK INDONESIA DKI JAKARTA – Jakarta, Indonesia

Internal Control Officer Intern

Aug 2025 – Feb 2026

- Enhanced a Microsoft Power Apps–based Internal Control Key (ICK) performance monitoring application by developing 7 new application pages and 3 input forms, introducing search, filtering, and PDF export capabilities to streamline performance evaluation workflows across 7 business units.
- Integrated Power Apps with 5 SharePoint lists by extending the existing data model, enabling seamless synchronization of performance assessment data and supporting centralized data management for the Internal Control Officer.
- Built 3 interactive Power BI dashboards to monitor monthly ICK achievement, calculation results, and department-level performance, replacing manual reporting and reducing report preparation time by 83% (from 3 hours to 30 minutes).
- Demonstrated strong collaboration with the application development team to maintain and enhance an internal performance monitoring solution, delivering feature improvements ahead of schedule and receiving positive feedback from management for improving usability and operational efficiency.
- Streamlined the monthly ICK reporting process by digitizing manual data entry and reporting workflows, demonstrating meticulous attention to detail to ensure data accuracy and UI consistency while eliminating repetitive administrative tasks.
- Conducted comprehensive data validation, testing, and QA checks on application inputs and calculation logic, ensuring the integrity of performance metrics displayed in Power BI dashboards.

DISKOMINFOSTANDI KOTA BEKASI – Bekasi, Indonesia

Data Analyst Intern

Mar 2025 – Jul 2025

- Led the end-to-end development of 2 web-based analytics and monitoring systems by gathering requirements from 4 stakeholders, translating business needs into 34 UML and system design artifacts, and delivering solutions for management and staff.
- Developed a Streamlit analytics platform integrating an Isolation Forest anomaly detection model to solve complex data integrity issues, utilizing predictive and prescriptive analytics to enable early identification of anomalous data across 20 datasets.
- Built 3 Power BI dashboards, 1 Tableau dashboard, and 20 interactive data visualizations using Python (Pandas, NumPy, Matplotlib, Plotly), Excel (Power Query, Pivot Tables), SQL, and MySQL, replacing Google Forms-based manual reporting with centralized monthly monitoring.
- Designed and published 20 public-facing data infographics using Canva, transforming complex analytical findings into accessible visual content to improve public understanding and communication of organizational insights.
- Improved operational reporting by automating data analysis and monitoring workflows using SQL and Python, leveraging AI tools for query refactoring and data validation, and presenting analytical findings to management, resulting in an AI-powered solution selected for an internal innovation competition.
- Facilitated collaborative meetings with end-users to gather system requirements, ensuring clear communication of technical solutions and alignment with organizational needs.
- Conducted exploratory data analysis on historical datasets to investigate performance trends, changes, and outliers, providing data-driven insights that supported management decision-making.

PROJECT

SIPDA Analytic Platform – Bekasi, Indonesia

Aug 2025 – Nov 2025

- Analyzed Developed a web-based analytics platform using Python and Flask for dataset management, exploratory analysis, predictive analytics, diagnostic analysis, and anomaly detection.
- Implemented Isolation Forest to identify anomalous observations and support data-quality monitoring across uploaded datasets.
- Developed interactive data visualizations and analytical modules to help users investigate trends, performance, and potential data issues.

- Integrated MySQL for dataset and metadata management and designed the platform to support data-driven monitoring and decision-making.

Global Coffee Export Analytics Dashboard - Independent Project

Jul 2026 – Aug 2026

- Analyzed comprehensive commodity trade data sourced from Kaggle using Python and Pandas to evaluate and compare the export competitiveness of Indonesia versus Brazil in the global coffee sector.
- Executed a rigorous data cleaning pipeline on raw datasets, including invalid value dropping (filtering out sub-zero prices and unnatural price-per-kg outliers), text standardization, and missing value imputation utilizing median values to ensure data integrity.
- Developed an interactive business intelligence dashboard using Streamlit and Plotly, enabling users to dynamically filter data (1990-2022) and explore insights through 5 comprehensive visualizations.
- Tracked and visualized critical market indicators head-to-head, highlighting Brazil's massive volume dominance (92.1 billion Kg) against Indonesia's strategic advantage in premium average pricing.
- Implemented automated, data-driven executive summaries utilizing Python f-strings that instantly adapt to user-selected timeframes, calculating exact YoY growth rates and market volume gaps in real-time.
- Deployed the full-stack web application via Streamlit Community Cloud, ensuring continuous accessibility for portfolio showcasing to stakeholders and technical recruiters.

Employment Placement Analytics Dashboard - Bekasi, Indonesia

May 2025 – Jun 2025

- Developed an interactive Tableau dashboard by cleaning, transforming, and visualizing 2022–2023 Open Data Kota Bekasi datasets, enabling more accessible analysis of employment placement and workforce distribution trends.
- Analyzed workforce distribution and employment placement data spanning 2 years, identifying key trends and presenting actionable insights through interactive visualizations.
- Collaborated in a 2-member internship team to design and deliver analytical dashboards, ensuring project objectives and reporting requirements were completed on schedule.
- Designed data-driven dashboards and visual reports using Tableau, translating complex datasets into intuitive visualizations that supported public information dissemination and stakeholder decision-making.
- Published analytical dashboards on the Open Data Kota Bekasi platform, increasing the accessibility of employment and workforce insights for public users and government stakeholders.

ORGANIZATION

KELOMPOK STUDI MAHASISWA CYBER SECURITY- Jakarta, Indonesia

Head Of Academic Division

May 2024 – Feb 2025

- Led the Academic Division by designing a 9-session cybersecurity curriculum and developing structured learning syllabi for 20+ members.
- Coordinated weekly mentoring programs as the Person-in-Charge (PIC), managing 3 mentors to ensure consistent delivery of academic activities and participant engagement.
- Delivered 3 hands-on cybersecurity mentoring sessions covering fundamental concepts and practical exercises for 20+ participants.
- Organized a Capture The Flag (CTF) competition for 30+ participants, collaborating with cross-functional committees to coordinate event planning and execution.
- Collaborated with other organizational divisions to enhance the quality and effectiveness of cybersecurity learning programs and academic initiatives.

EDUCATION

UNIVERSITAS PEMBANGUNAN NASIONAL VETERAN JAKARTA – Jakarta, Indonesia

Aug 2022 - Now

Last Year Computer Science Student; Cumulative GPA: 3.87/4.0

ADDITIONAL

Technical: SQL, MySQL, Python, Excel, Power BI, Tableau, Laravel, Bootstrap, Requirement Analysis, UML, Flowchart, Use Case Diagram, Database Design, Power Apps, SharePoint

Languages: English (Intermediate), Indonesia (Native)

Certifications & Training: BNSP Certified System Analyst
